Introduction

Thank you for purchasing our company's LED all-in-one video controller. Hope you can enjoy the excellent performance of this product. The design of this LED all-in-one video controller complies with international and industry standards, but improper operation may still cause personal injury and property damage. In order to avoid the possible dangers caused by the equipment, and to benefit from your equipment as much as possible, please follow the relevant instructions in this manual when installing and operating the product.

Trademark Credit

- VESA is a trademark of the Video Electronics Standards Association.
- HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing LLC.
- Even if the company or product trademark is not specifically stated, the trademark has been fully recognized.

About the software

It is illegal to modify, decompile, disassemble, decrypt or reverse engineer to the software installed on this product.

Product Features

- Standard multiple input interfaces:HDMI2.0×1、 DP1.2×1 、 DVI×2、 12G SDI×1、 Audio×1; Support for expansion:HDMI2.0+DP1.2
- Support HDMI2.0 loop out
- Support for zoom and image capture functions
- Support quick light screen, no need PC software to configure the screen
- Support single input port 4K×2K/60Hz(HDMI2.0) or 8K×1K/60Hz(DP1.2) resolution
- 4K60 RGB 4:4:4
- Support window size & position adjustment and image crop
- Supporting four-layer full screen walk through and layer quick templates
- Support seamless switching between input sources and preset
- Support customized input/output resolution
- Single network port standard load 0.98 million pixels, a single machine can carry maximum width 16380 pixels and maximum height 7680 pixels
- Support template save and load
- Support connection to MAGNIMAGE C-Link series receiving cards
- Support reading and loading of configuration files from native U disks
- Support monitoring output function
- Support free cable connection function
- Support input backup for single machine
- Support network port backup for single machine and multi-machine
- Support receiving card serial number mapping, switch on the intelligent serial number to visually check the position of the cabinet
- Built-in loop function for RJ45 control port, no need local network, easy to control for cascade operation
- Support multi-input mosaic within single machine and multi-cascade mosaic
- Support central control for RS232
- Support external independent audio input and output

- Support caption function
- Support time task function, timed brightness
- Support for fiber optical input/output and backup
- Support lock button
- Supports 120Hz continuous 3D display and left&right or up&down 3D display with 60Hz (model: LED-F816-C3D)

Port Extension

LED-F812-C/LED-F816-C is basic model number , we can extend Input Source on the basis of basic model. Extension model are as follows:

Available Expansion Modules		Product Model
Input module	Standard allocation+Expand 1 external HDMI2.0 and 1 external DP1.2 input module	LED-F812-CH
	Standard allocation+Expand 1 external HDMI2.0 and 1 external DP1.2 input module	LED-F816-CH
Output module	LED-F816-CH+Expand 1 external 3D output module	LED-F816-C3D

Note:

LED-F812-C is the same as LED-F816-C in input configuration, name method and function, The differences between LED-F812-C and LED-F816-C are as follows:

Product Mode	Port	Quantity	Resolution specification
LED-F812-C	Gigabit network port	12	Single network port standard load 0.98 million pixels, and the whole machine carries 11.76 million pixels. a single machine can carry maximum width 16380 pixels and maximum height 7680 pixels
LED-F816-C	Gigabit network port	16	Single network port standard load 0.98 million pixels, and the whole machine carries 15.68 million pixels. a single machine can carry maximum width 16380 pixels and maximum height 7680 pixels

Next, we will explain to you the model LED-F816-C3D All-in-one video controller:

Safety Notice

The input voltage range of the power supply of this product is 100~240V, 50/60Hz, please use the correct power supply.

When you want to connect or unplug any signal cable or control cable, please make sure that all power cables have been unplugged beforehand.

When you want to add hardware devices to this product or remove hardware devices from this product, please make sure that all signal cables and power cables have been unplugged in advance.

Before performing any hardware operations, power off the LED video processor and discharge static electricity from your body by touching a grounded surface.

Please use it in a clean, dry and ventilated environment, and do not use this product in a high temperature, humid environment.

This product is an electronic product, please keep it away from fire, water and flammable and explosive dangerous goods.

There are high-voltage components in this product, please do not open the case or repair the device by yourself.

If you find any abnormality such as smoke or odor, please Function off the power switch immediately and contact the dealer.

Features

Overview

The video control server is a video controller created by Magnimage, which integrates video processing, splicing, switching and LED screen sending card functions. This series integrates various professional input interfaces, supports up to 4K × 2K/60Hz or 8K×1K/60Hz; LED-F812-C single machine can load 11.76 million pixels, support 12 Gigabit Ethernet port output; LED-F816-C single machine can load 15.68 million pixels, support 16 Gigabit Ethernet ports for output, can be used with the company's support to connect Magnimage C-Link series receiving cards.

The load capacity of all-in-one video controller is twice of the ordinary all-in-one video controller, and supports EDID management and customize output resolution, single controller output max width can be 16380 pixel, up to 120HZ refresh rate. Greatly improved the utilization of output bandwidth. The output image can be scaled point by point according to the actual size of the LED display.

Complete video input interface, including: DVI×2、DP1.2×1 (support 8K×1K/60Hz)、HDMI2.0×1 (support 4K×2K/60Hz)、Audio×1、12G SDI×1、and can also extend HDMI2.0+DP1.2 input source. Support HDMI loop-out × 1, HDMI Monitor output × 1, And it supports network, square port USB and RS232 serial port control, which is convenient for interconnection and control with a variety of video equipment.

Front Panel

Button Description			
Rotary knob	Select menu items and adjust parameters	INPUT3	HDMI1
	Return button, return to the previous menu	INPUT4	DP1
LAYER 1	Layer1	INPUT5	Extend input port
LAYER 2	Layer2	INPUT6	Extend input port
LAYER 3	Layer3	INPUT7	Extend input port
LAYER 4	Layer4		
INPUT1	DVI1		
INPUT2	DVI2		

Back Panel

LED-F816-CH

LED-F816-C3D

Technical Specifications

Input Information		
Port	Quantity Of	Resolution Specification
DVI	2	Maximum resolution: 3840×1080/60Hz, Backward compatibility Supports EDID management Custom resolution , Maximum width 4094 pixels, maximum 3840 pixels
DP1.2	1	Maximum resolution: 7680×1080/60Hz, Backward compatibility Supports EDID management Custom resolution , Maximum width 7680 pixels, maximum 3840 pixels
HDMI2.0	1	Maximum resolution: 3840×2160/60Hz, Backward compatibility Supports EDID management Customized resolution , Maximum width 4094 pixels, maximum 3840 pixels The front-end forces input maximum support: 7680×1080/60Hz
12G SDI	1	2160P and other 12G-SDI standards
OPT1~OPT2	2	10G optical fiber interface, can be used as signal input
HDMI2.0+DP1.2 (extend)	2	7680 x 1080/60Hz,3840 x 2160/60Hz and below customized
3.5mm Audio (IN)	1	Can be external audio, with multi-function card output audio signal

NOTE: Only Layer 4 support HDMI and SDI input deinterlacing

When OPT1, OPT2 are used as optical port inputs, only the OPT output data of the front-end devices 640Pro, V12, V16 and other devices of MAGNIMAGE will be received.

Output Information

Port	Quantity	Resolution Specification
Gigabit Ethernet Port	16	single port load 0.98 million pixels, whole unit load 15.68 million pixels maximum width 16380 pixels, maximum height 7680 pixels
HDMI2.0 LOOP	1	Can loop out HDMI2.0 input source, resolution is consistent with the input resolution of HDMI2.0
HDMI Monitor	1	Output monitoring, 1920×1080/60Hz
OPT1~OPT2	2	10G Optical Fiber Interface, Supports replication or hot backup mode

Note: When OPT 1-OPT 2 is used for optical port backup or replication signal output, OPT 1 corresponds to network port 1-8 outputs data, and OPT 2 corresponds to network port 9-16 outputs data.

Machine Specification

Input Voltage	100-240V AC~50/60Hz 0.6A
Operating Temperature	0-45°C
Dimensions	482.6×421.3×88 mm (L × W × H)
Net Weight	7.6KG
Power Consumption	80W

Use Menu

Using the product menu system can easily and intuitively set the machine to meet the user's use requirements

The all-in-one video controller uses a full-color LCD display to display the entire user menu. When the user does not operate or the operation times out, the default state will be displayed on the LCD screen. If you use the buttons on the front panel of the machine to set the machine, the LCD screen will display the corresponding menu according to the user's operation to prompt the user to operate better, faster and more intuitively.

The following will combine the button functions and the display of the LCD screen to introduce the menu system of the all-in-one video controller in detail.

How to use the buttons

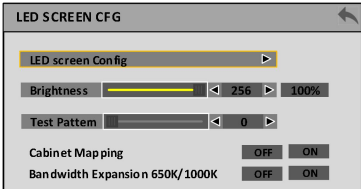

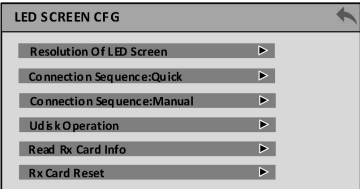

The front panel button of controller divide to 3 areas, MENU、LAYER、INPUT

MENU Area:

This area contains 1 buttons and a knob that can be pressed; ➡ button and knob.

Short press the "knob", its function is the same as the confirmation button(OK) ; when press the return button(➡) , the menu system will return to the previous menu in turn, until it returns to the default state.

In the main menu, the enter button can also used for switch between browsing mode and setting mode, for example:

Browsing Mode	Setting Mode
	

↖ confirm button, short press knob, can switch between the two modes ↗

Under browse mode, Anticlockwise rotate the "knob", the cursor moves up or left; rotate the "knob" clockwise, the cursor moves down or right. When moving the cursor to the item to be adjusted, press the "knob" or the confirm button to enter the setting mode, then turn the "knob" anticlockwise to decrease the current parameter value; turn the "knob" clockwise, Then the current parameter value can be increased. To continue setting other items on this page, please switch back to browse mode. If you want to return to the previous menu, please use the return button; if the adjustment is completed, press the return button to return to the previous menu until the default state.

LAYER Area:

This area contains 4 buttons; LAYER1, LAYER2, LAYER3, LAYER4; Corresponding to the 4 active screens inside the machine.

Long press the button to Function on or off the corresponding screen. The one that has been used is white, and the current selection is red.

Short press to select the layer.

INPUT Area:

This area contains 8 buttons: DVI1、DVI2、HDMI1、DP1、SDI1、OPT1、INPUT5 and INPUT6 are extended input buttons

The way of selecting a signal is to first select the LAYER in LAYER area, then select the corresponding signal.

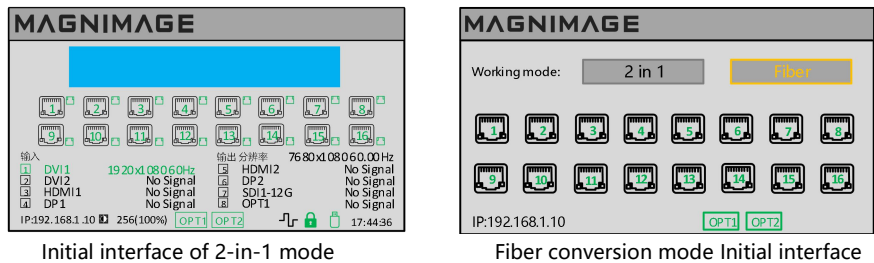

When there is a signal in the input, the button light is white; the currently selected one is red.

Introduction to Default State

After turning on the power of the all-in-one video controller, during the system boot process, the boot interface will be displayed on the LCD screen of the front panel. After the startup is completed, the default state of the current

machine will be displayed on the screen, as shown in the figure below:

LED-F816-C:

The information in the above figure is explained as follows:

Symbol	Description
INPUT1-8	The input interface type corresponds to INPUT1-8. The input resolution is displayed. If No signal is displayed, the NO signal status is displayed
Output resolution	Current device output resolution and output refresh rate
	Network port number. Network cable Connects the network port to the screen If the communication is normal, the network port number is green. If the communication is abnormal, the network port number is white
IP	IP address of the local device
	Current LED display brightness value
	10 Gbit/s optical port connects the two devices with optical cables If the communication is normal, the OPT icon is green. If the communication is abnormal, the OPT icon is white
	Sync icon, indicating input splice sync/multi-machine splice sync
	Button lock status
17:44:36	Machine current time

Main Menu Introduction

In the main menu, the user uses the “↔” buttons and the knob to select and adjust each item. The operation mode is as follows:

Operate	Introduction
Open Main Menu	In the default state, press the rotary knob or slide the "magnimage" in the upper left corner
Select each Item	Rotate the knob to select each item
Adjust Parameter	parameter When the right item is a number or option parameter, rotate the knob
Enter Next Level Menu	When the project has a highlighted box, press the knob or click on the screen
Operate Function	Use knob to select the item to be operated,and press the knob or click on the screen
Return To Previous Menu	press “↔” button
Confirm Operation	When resetting and other operations, in order to avoid wrong operation,You need to press the knob or click on the screen to confirm the operation

Description of the numeric buttonpad: For any parameter that needs to be modified, in addition to pressing the knob and rotating it, and touching the left and right direction buttons, you can also touch and click the corresponding parameter to pop up the numeric buttonpad on the screen for operation. Where 0 to 9 represent numbers  Represents a decimal point,  represents exiting the numeric buttonpad mode,  represents confirming the parameter modification, and  represents backspacing to delete the entered number. The numeric buttonpad is shown in the following figure.

Main Menu

In the default state, press the rotary knob or swipe the "MAGNIMAGE" button in the upper left corner, and the menu system will enter the main menu state. and the LCD screen will display as shown in the figure below:

There are 8 menu items in the main menu. Use the knob to select the 8 menu titles listed above. After selecting, press the knob to enter the selected item, and press the "➡" button to return to the previous menu

Mapping

Open the box marking, the LED display shows the serial number Cabinet of the carrier network port and the serial number of the box, which is Mapping convenient and intuitive to make the display connection diagram

Bandwidth

Expansion Of
0.65/1.0 Million
Pixels

Collaborate with a receiving card that can enable bandwidth expansion to increase network port load

INPUT

INPUT PORTS LIST:

IMAGE CROP:

OFF

HDMI/DP RGB Range:

NO

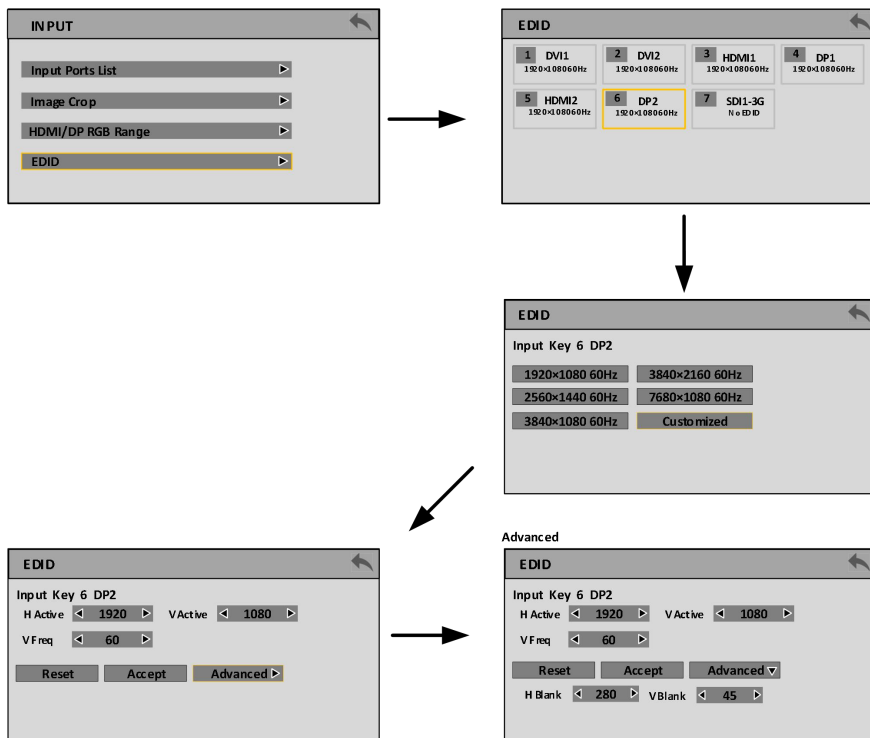

Input Ports List	Display the input information of all input ports on this device, with the displayed content being input resolution or no signal
Image Crop	All input signals from input 1 to input 8 can be intercepted at will. By selecting the input number and input signal that need to be intercepted through the knob or touch, you can enter the detailed operation menu for image capture.
DVI	Indicates the input signal currently be intercept

Function Off	Function off Image crop	
Function On	Function on Image crop	
Reset	Reset Image crop	
Matching Input Signal	Match the image capture parameters below with the image parameters of the input signal	
Image Crop Setting	Horizontal Position	Modify the horizontal position of image crop
	Horizontal width	Modify the horizontal width of image crop
	Horizontal Base	Modify the horizontal base of image crop
	Vertical Position	Modify the vertical position of image crop
	Vertical Height	Modify the vertical height of image crop
	Vertical Base	Modify the vertical base of image crop
RGB Range	Adjust RGB range for any input, set AUTO/ "0-255" / "16-235"	

NOTE: To crop an image, first select input 1 to input 8, and then select the signal to be crop in the corresponding area below.

The image crop function is the function of selecting a portion of the input signal and outputting it to the LED display screen according to the layer size. Therefore, the size and position of image crop are limited to the resolution of the input signal. The various setting parameters in the above table are mutually restrictive.

EDID CFG:

Input signals from Input 1 to Input 6 can be set by selecting the knob
 Select the ring touch and click on the input number and signal that
 requires EDID to enter the detailed operation menu for EDID
 configuration

EDID Setting	DVI 1	Indicates the input sequence number and input signal currently being configured for EDID
	Horizontal Resolution	Modify the horizontal resolution of EDID
	Vertical Resolution	Modify the vertical resolution of EDID
	Reset	Reset all parameters of EDID
	Application	Write EDID parameters to the computer graphics card
	Advanced	Do not adjust or modify any parameters in the advanced

submenu without the support of our company's technical personnel. If you accidentally modify the menu, you can click the reset button.

H Blank	Modify the horizontal blank of EDID
V Blank	Modify the vertical blank of EDID

NOTE: After setting up the EDID, for different computers and graphics card outputs, it may be necessary to restart the computer or unplug the signal cable. In the display settings menu of the computer, select the corresponding resolution.

LAYERS

Size/Position:

Zoom:

Size/Position	Can change the horizontal position, vertical position, horizontal width, vertical position of each layer		
	Layer1~4	Select the layer that needs to be zoom	
ZOOM	Function	Off/On	Function off or Function on layer zoom
	Reset	Reset layer zoom	
	Matching Signal	Input	Match the corresponding horizontal/vertical reference based on the input signal resolution
	Layer Setting	Zoom	Adjusting the size, position, and datum of layer zoom

Layer zoom:

Note: The horizontal/vertical reference parameters can be simulated as the resolution points of the front-end input signal. If you need to use the magnification function to obtain the portrait screen on the left side in the above picture, the parameter Settings are shown in the table:

H Pos.	540	V Pos.	540
Width	1920	Height	1080
H total	7680	V total	2160

Zoom in on the resulting picture

Backup

Backup Ports Setting :

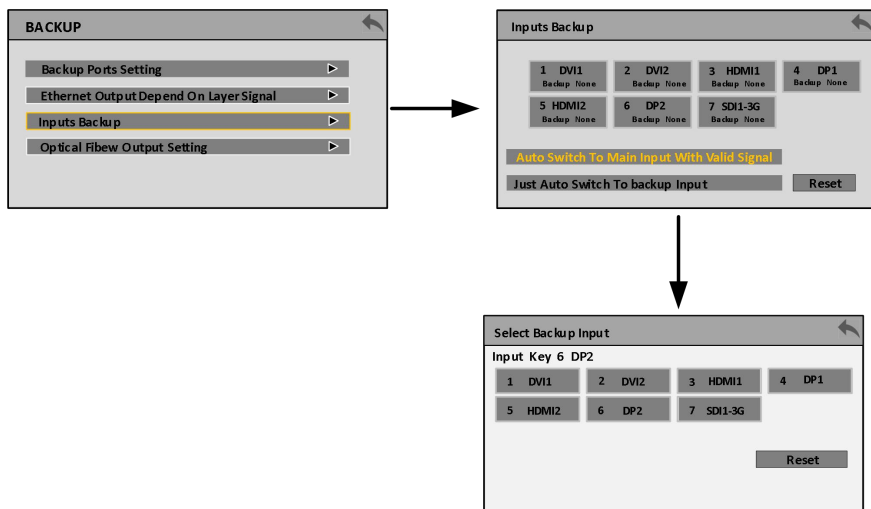

Ethernet Output Depend On Layer Signal :

Local Backup	Single machine can specify any network port for backup.	
Multi-Machine Backup	Host Machine	When multiple machines are in the same LAN, you can choose another machine as backup or master, and set the IP address of another machine to achieve fast backup.
	Backup Machine	Set the IP address of the host on the backup machine
Ethernet Output Depend On Layer Signal	After being used as a multi machine backup, this function can be used. When the layer signal is lost, a backup line switch is triggered, and devices with the same group in the local area network will trigger simultaneously	

Note: The host is in one group when grouping, and the backup machine is in another group, and they are in the same local area network.

Inputs Backup:

Optical Fiber Output Setting:

Inputs Backup Used for signal hot backup, after setting up the backup, if the current input signal is lost, it will switch to the backup preset according to priority to prevent situations such as screen blackout after signal loss.

Optical Port Copy Long-distance transmission for devices

Optical Port Backup Used for ring out backup between two devices (network port backup)

Warranty

Machine Warranty Period

- 24 months from the date of the user's purchase invoice;
- If the user's purchase invoice is lost, the 60th day after the production date of this product is the start date of the warranty for this product.

Non Warranty

- Faults or damages caused by abnormal use reasons such as stains or surface scratches caused by machine immersion, collision, or use;
- Dismantling or modification without our company's consent;
- Failure or damage caused by use in a working environment other than that specified by the product (such as excessive temperature, low temperature, or unstable voltage);
- Faults or damages caused by force majeure (such as fires, earthquakes, etc.) or natural disasters (such as lightning strikes, etc.);
- The product has exceeded the warranty period.
